

LUMBINIX HACKATHON

HELLO, EVERYONE.

We are **Team Everest**.

Aaditya ▪ Binayak ▪ Nabin ▪ Siddanta

Chitwan, Nepal

And today, we want to take you on a journey.

We all know this experience

WHEN WE VISIT A NEW HERITAGE SITE...

The map helps us navigate.

But what if we want to understand the exact place we are standing in?

Your first visit to Lumbini.

You don't get lost by location.

You get lost by wisdom.

You can navigate the place without understanding the place.

So we built Saksi

What if the place could guide you?

SAKSI

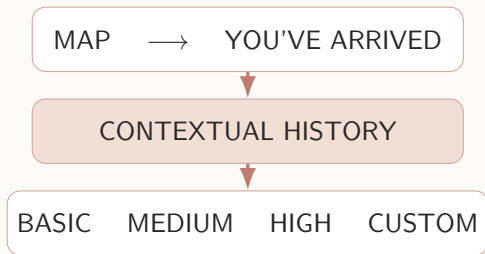

A digital companion for mindful exploration.

Tirtha: the place speaks

THE JOURNEY

What if wisdom appeared exactly when you needed it?

- Walk through Lumbini on a live map.
- Arrive at a site and receive context for that place.
- Choose your depth: quick fact, deeper history, or custom.

The idea

The map shows you **where**. Tirtha tells you **why**.

Saksi: from visitor to witness

THE WITNESS

Don't just visit heritage. **Witness it.**

The tourist becomes the guardian.

The evidence loop

A fixed viewpoint, a known day, and a human-confirmed condition turn attention into a record a conservator can trust.

Dhamma: when knowing is still not enough

THE TRUTH

The usual AI answer

Fast. Fluent. Unreferenced.

The Dhamma answer

Grounded in referenced Buddhist sources, with an honest refusal when the sources do not support a claim.

QUESTION

REFERENCE

GUIDANCE

Nepali-first, with
an English option.
Source text and ci-
tations stay intact.

Don't just get an answer. Get guidance grounded in the source.

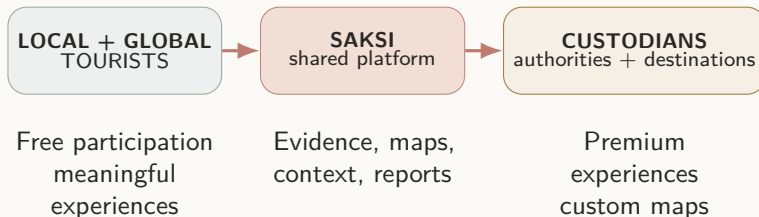

LIVE DEMO

Let's experience it.

One journey. Three layers of wisdom.

One platform. Multiple value streams.

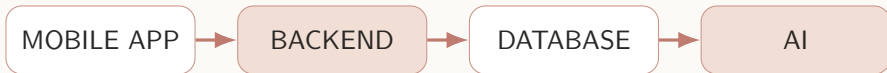

The sustainability logic

Visitors contribute the evidence and attention; custodians pay for the tools and experiences that help them care for a place.

We built it with what we have

THIS IS NOT JUST AN IDEA.

MVP stack

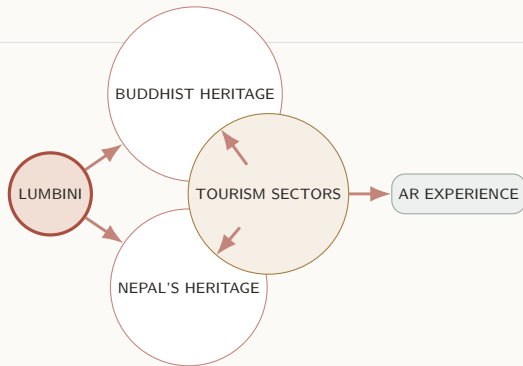

Expo + React Native
Open maps + geospatial layer
Supabase + FastAPI
Open / free model integrations

A trust-first foundation

The phone saves the record first. Saksi never fakes a measurement, never turns “by eye” into “measured,” and keeps the human in the loop when AI suggests a condition.

Simple stack. Real MVP. Ready to scale.

Future: from one place to a living heritage network

From navigation → **immersive understanding**

Start with Lumbini. Expand across Nepal's heritage—and eventually, AR.

EXPLORE. WITNESS. UNDERSTAND.

Aaditya Sapkota ▪ Binayak Gautam ▪ Nabin Poudel ▪ Siddanta Sodari

Navigating the modern world with timeless wisdom.

THANK YOU
